Royal Blue #2

Light Blue #3

Teal #4

Turquoise #5

Green #6

**NOTE:** It is impossible for the fabric material that covers the pool to be crease free. The cover material is manufactured to the width of the track to track measurement plus an excess amount of material. The excess material is to allow the cover to lay correctly on the water surface. If it did not lay correctly, there would be a bind condition. Also the excess material is necessary to allow for changing water levels. Therefore, when applying a cover to the roller drum, a number of folds need to be made, which results in creases forming in the cover at the vault / surface housing end. The amount and length of creases differ on every Aquamatic installation which is dependant on size, shape etc.
